DETAILED ACTION

This is the First Office Action in response to the Election filed on March 31, 2006.

Election/Restrictions

1. Claim 2 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 5-8 and 14-17, directed to the non-elected species, are no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Application/Control Number: 10/617,724 Page 3

Art Unit: 3682

Drawings

3. Figure 8 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Kraus (US Patent 3,087,348).

Kraus teaches a power roller supporting structure for a toroidal continuously variable transmission, the power roller supporting structure comprising: a moveable disk (16) rotatable about a first axis and axially moveable; a stationary disk (18) rotatable about the first axis and axially fixed, each of the moveable and stationary disks having a contact surface; power rollers (20) disposed between the moveable and

Application/Control Number: 10/617,724

Page 4

Art Unit: 3682

stationary disks in contact with the contact surfaces thereof, each of the power rollers being rotatable about a second axis and pivotally moveable about a third axis extending perpendicular to the second axis upon rotation of the moveable and stationary disks, the power rollers having a friction contact position relative to the moveable and stationary disks in which a speed ratio between rotational speeds of the moveable and stationary disks is determined, the friction contact position including a low speed ratio position where a reduced speed ratio is obtained and a high speed ratio position where an increased speed ratio is obtained.

Referring to Figures 11-14, Kraus illustrates different embodiments of a loading device for pressing the rollers towards a direction of the first axis along the second axis. Note, the claim language "for allowing the power rollers to move closer to the first axis along the second axis when the power rollers are placed in the low speed ratio position than when the power rollers" is considered functional language and does not overcome the prior art because Kraus shows structure that is capable performing the claimed movement.

Allowable Subject Matter

6. Claims 2-17 are allowed.

Art Unit: 3682

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the roller supporting structure allowing the roller to move along the second axis of Dawe et al. ('863), Fellows et al. ('337), or Haka ('144).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Joyce whose telephone number is (571) 272-7107. The examiner can normally be reached on Monday - Thursday 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Ridley can be reached on (571) 272-6917. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
